

JOSEPH BIRD

SUMMARY

Cybersecurity student pursuing a Quality Assurance role at Hypixel, with professional experience reproducing reported failures, investigating root causes, and resolving support tickets. Combines deep game knowledge with software development and maintenance experience.

HYPIXEL & MINECRAFT EXPERIENCE

- **5,000+ hours in Hypixel SkyBlock**, with detailed knowledge of progression, combat, economy, and interactions between game systems.
- **Thirteen years of Minecraft experience** and a technical understanding of gameplay mechanics, multiplayer behavior, and client/server interactions.
- Strong familiarity with the Hypixel modding ecosystem, mod compatibility, and how client-side modifications interact with Minecraft and server-side mechanics.

EXPERIENCE

FM

January 2026 – September 2026

Infrastructure Engineering Co-op

- Investigated Platform Operations support tickets for GitHub Actions and Azure Pipelines, reproducing reported failures, isolating root causes, and implementing fixes and workflow solutions.
- Developed Ansible automation for F5 and VMware infrastructure to make configuration changes repeatable.
- Collaborated across four teams: Platform Operations, Platform Shared Servers, Integrated Services, and Core Automation.
- Worked with security teams to establish secure access and usage practices for Ansible Automation Platform Controller.

TECHNICAL PROJECTS & LEADERSHIP

OBIII Discord Bot – *Maintainer, RITSEC*

- Own maintenance of RITSEC's production Discord bot, investigating issues, fixing defects, and adapting the application to Discord platform updates.
- Built database integrations connecting local member records with CampusGroups attendance data and added slash commands to simplify administration.
- Automated deployments to separate development and production environments.

Desktop Detective Goose – *Rust*

September 2026 – Present

- Developing a desktop mystery app inspired by Desktop Goose, with planned clue discovery through files, notes, and web browsers.
- Implemented transparent, always-on-top rendering and a 12-frame walking animation with time-based movement using Rust, `winit`, and `pixels`.
- Debug rendering, movement, and windowing issues, including transparency and macOS full-screen behavior.

Hermes Scoring Engine – *Scoring Lead & Developer, RITSEC*

September 2025 – Present

- Lead scoring-system design and development for a replacement red-team/blue-team competition platform, including inject-management workflows.
- Develop scoring checks in Go, REST APIs, and competitor/admin interfaces; contributed **100+ commits** to the project, which remains in development.

EDUCATION

Rochester Institute of Technology

Expected June 2028

Bachelor of Science in Cybersecurity

SKILLS

QA & Support: Issue triage, bug reproduction, issue tracking, root-cause analysis, production support

Languages & Development: Go, Rust, Python, Java, JavaScript, Bash, SQL; Git, REST APIs

Automation & Platforms: GitHub Actions, Azure Pipelines, Ansible/AAP, Linux, Docker, VMware, F5
